AutoCAD For Windows

AutoCAD History AutoCAD was first announced in 1982, and was released in January 1983. It was developed by a group of employees at Environmental Systems Research Institute (ESRI) in San Rafael, California, led by Scott Harris. It was designed for companies that produced architectural and engineering blueprints. The first version of AutoCAD was a 16-bit DOS application. A 16-bit DOS version of AutoCAD was created in 1982, and was made available as an introductory-priced, introductory-feature, introductory-price package. However, it was replaced in 1983 by a 32-bit version. In 1983, AutoCAD became one of the first major cross-platform (also known as multi-platform or network) software packages. In 1989, AutoCAD was released for the Macintosh and Microsoft Windows operating systems. In 1992, it was released for Unix (Solaris, AT&T Unix, HP-UX, AIX, SCO Unix, and Linux) and Macintosh (OS 9 and OS X). AutoCAD for Windows was available for the Microsoft Windows operating system from 1982 until 2016, when it was replaced by AutoCAD LT, a version available for Microsoft Windows operating systems from Windows XP and later. AutoCAD has been available for the macOS operating system since 1991. The macOS version was named AutoCAD 2012 R2 until 2016, when it was renamed to AutoCAD LT. In 1991, AutoCAD became the first third-party CAD program to support the Spatial Data Interchange (SDI) standard, and later, the Open Database Connectivity (ODBC) standard. The software was also the first to support large data block-level, file-level, and bit-block-level data interchange. The original AutoCAD drawing file format is a proprietary format. It was developed by ESRI in 1983 and described in U.S. Patent 6,429,551 and other patents. In 1985, ESRI released a standardization committee called the Office of Technology Transfer. ESRI tasked the Office of Technology Transfer with the task of creating a standard file format for graphics interchange. In 1990, the Office of Technology Transfer published a standard for a structured drawing file format. This format was intended to be used by AutoCAD. The standardization committee consisted of 25 members from different organizations. This standardization committee was called the "Ad Hoc Architecture Committee". The standardization
